128. Longest Consecutive Sequence

Medium

Topics

Companies

Given an unsorted array of integers `nums`, return *the length of the longest consecutive elements sequence.*

You must write an algorithm that runs in `O(n)` time.

Example 1:

```
Input: nums = [100,4,200,1,3,2]
Output: 4
Explanation: The longest consecutive elements sequence is
 [1, 2, 3, 4]
. Therefore its length is 4.
```

Example 2:

```
Input: nums = [0,3,7,2,5,8,4,6,0,1]
Output: 9
```

Example 3:

Input: nums = [1,0,1,2]
Output: 3

Constraints:

- 0 <= nums.length <= 10^5
- -10^9 <= nums[i] <= 10^9

I'm looking at solutions and as soon as I see "sort" you've failed, its not O(n)

this deserves to be hard for o(n)

People forget why this problem is medium.
Everyone can solve this problem in O(nlogn).

But only few people can come up with their own algorithm with O(n) time.

Who is gonna tell them.

You can run your code against these test cases before submisson. Hope it helps!

[100,4,200,1,3,2]
[0,3,7,2,5,8,4,6,0,1]
[1,2,0,1]
[0]
[0,0]

So many solutions here claiming to be O(n) are actually either O(n^2) or O(nlogn). How can people here have such poor understanding of time complexity.

Description: `You must write an algorithm that runs in O(n) time.`
Top solution: `sort(nums)`

(facepalm)

How does [1,2,0,1] tc gives output as 3? It should be 2! Someone please clarify.
[0,1,1,2] -> has at most 2 consecutive nos.
