[205. Isomorphic Strings](https://leetcode.com/problems/isomorphic-strings/)

Easy

Topics

Companies

Given two strings s and t , determine if they are isomorphic.

Two strings s and t are isomorphic if the characters in s can be replaced to get t .

All occurrences of a character must be replaced with another character while preserving the order of characters. No two characters may map to the same character, but a character may map to itself.

Example 1:

Input: $s = \text{"egg"}$, $t = \text{"add"}$

Output: true

Explanation:

The strings s and t can be made identical by:

- Mapping ' e ' to ' a '.
- Mapping ' g ' to ' d '.

Example 2:

Input: $s = \text{"foo"}$, $t = \text{"bar"}$

Output: false

Explanation:

The strings s and t can not be made identical as ' o ' needs to be mapped to both ' a ' and ' r '.

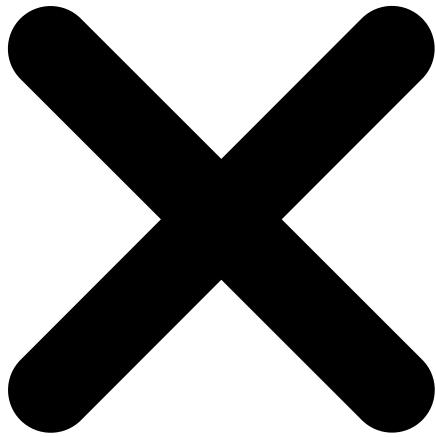

Example 3:

Input: $s = \text{"paper"}$, $t = \text{"title"}$

Output: true

Constraints:

- $1 \leq s.length \leq 5 * 10^4$
- $t.length == s.length$
- s and t consist of any valid ascii character.

I must admit, this "easy" problem confused the hell out of me :) I had hard problems solved like a breeze, but this one... gush :)

Anyone facing issue in understanding the description of this question. You must understand the this question needs us to check if there is one directional map exist between given string and a pattern. In the given question, we can treat 's' as given string and 't' as pattern. So, essentially, we have to check if there is a one-directional map exist from 's' to 't'.

Whatever character is there in 's' is not same as in 't'. For instance, s = 'PAPER', t = 'TITLE'. If we can see, character 'E' is common between string 's' and pattern 't'. Character 'E' from string 's' is mapped to character 'L' in pattern 't'. Meanwhile, character 'E' in the pattern 't' is being mapped to character 'R' from string 's'.

string (s) pattern (t)

P T

A I

E L

R E

So, as long as, character from string 's', have only one map towards character in pattern 't', the strings are isomorphic.

The problem itself is very easy, but the description of isomorphic is not explained enough here, after reading so many discussion below I find the what is the meaning of isomorphic in this problem.

Lets check examples -

1. EGG -> ADD [E->A, G->D] --- true
2. FOO -> BAR [F->B, O->A|B?] --- here O has different choice either A or B ; false
3. BADC -> BABA [B->B, A->A, D->B, C-> A] --> here B has mapping to B & D so false; To think more clearly think from mapping t to s [B->B, A->A, B->D!, A->C!] now if you see from t to s then both B & A has multiple map --- false
4. PEAR -> TILE [P->T, E->I, A->L, R->E] && t to s [T->P, I->E, L->A,E->R]; so from both side no single character has to be mapped multiple value so its isomorphic -- true;
5. BBBAAABA -> AAABBBBA [B->A, A->B, 7th B->B!, 8th A->A!] --- first 6 char has no problem to map B->A, A->B but when you come to 7th B the mapping become B instead of A so its not isomorphic. --- false
6. ABC -> CAC [A->C, B->A, C-> C] && from t to s [C->A, A->B, last C->C! instead of A] so not isomorphic -- false

Conclusion: you have to map from both separately t->s && s->t ; IF any char point to two separate val then its not isomorphic.

Cheers!.....

How is "PAPER" and "TITLE" isomorphic?

Here is how it maps

P <=> T (P maps to T and vice versa)

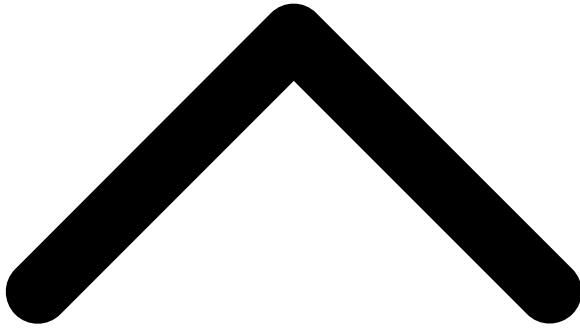

A <=> I (A maps to I and vice versa)

E -> L (E maps to L)

but R -> E (R maps to E ??)

E and R are throwing me off.

From what I understand, PAPER and TITLE are not isomorphic.

How do you even check an input like this

Test Cases:43/44

s =

```
"abcdefghijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!"#$%&'()*, - ./; <=>?@[\]^_{}~  
abcdefghijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!\"#$%&'()*)+, - ./; <=>?  
@[\\]^_{}~abcdefghijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!"#$%&'()*, - ./; <=>?  
@[N]^_{}~  
abcdefghijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!\"#$%&'()*)+, - ./; <=>?  
@[\\]^_{}~abcdefghijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!"#$%&'()*)+, - ./; <=>?  
@[N]^_{}~  
abcdefghijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!"#t="b"cfg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQR  
<=>@[N]^_{}~?  
\ "bcdefg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!a#$%h'()*)+, - ./; <=>  
@[\\]^_{}~?"bcdefg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!a#$%h'()*, - ./; <=>  
@[N]^_{}~?  
\ "bcdefg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!a#$%h'()*)+, - ./; <=>  
@[\\]^_{}~?"bcdefg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!a#$%h'()*, - ./; <=>  
@[N]^_{}~?  
\ "bcdefg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!a#$%h'()*)+, - ./; <=>  
@[\\]^_{}?"bcdefg&ijklmnoprstuvwxyzABCDEFGHijklmnOPQRSTUVWXYZ0123456789!a#$%h'()*, - ./; <=>  
@[N]^_{}?"bcdefg&ijklmnoprstuvwxyzAB...  
43 / 44 testcases passed
```

Output

false

Expected

true

By example 3 s = "paper", t = "title" are isomorphic to each other.

But why the paper is not supposed to isomorphic to tit"r"e?

or the title isomorphic to pape"l"?
